

ENHANCE

HEALTH SERVICES

A division of Disability Services Australia

Communicating with Confidence

Our team of Speech Pathologists support people experiencing issues with communication through assessments and therapy. We use a range of standardised and non-standardised assessment measures to diagnose a communication disorder/delay, inform therapy and to make appropriate recommendations to other specialists.

With experience and knowledge of Speech, Language and Augmentative and Alternative Communication (AAC), our team provides assessment and therapy to support, build and improve social communication.

Our Speech Pathologist team provide assessment and therapy to assist with:

- Finding the right device if technology is needed to communicate
- Enhancing language skills to expand vocabulary in daily living
- Targeted social communication by improving confidence with body language in unfamiliar social settings
- Improve speech clarity or reduce stuttering
- Keyword sign training to support functional communication

Safe Eating and Drinking

Our team of speech pathologists can help if a person is having difficulty eating and swallowing when drinking or at risk of food or fluid entering their lungs (aspiration), or choking.

We offer mealtime management support such as change of equipment, altering positions, muscle-strengthening exercises, changes to fluid thickness or change to diet consistency. Our mealtime review provides a thorough assessment, a detailed plan that is easy to follow and training on that plan.

About Enhance

We are experts in positive behaviour support and offer a wide range of assessments and therapeutic services (speech, psychology and occupational therapy) for youth and adults. As a division of Disability Services Australia, we really understand people with a disability and the needs of their support networks.

Come to us or we can come to you.
